

In order to use a virtual desktop as if we are sitting in a computer class of the ZTF-FCT from a PC that is not in the UPV/EHU network, you have to follow the next steps:

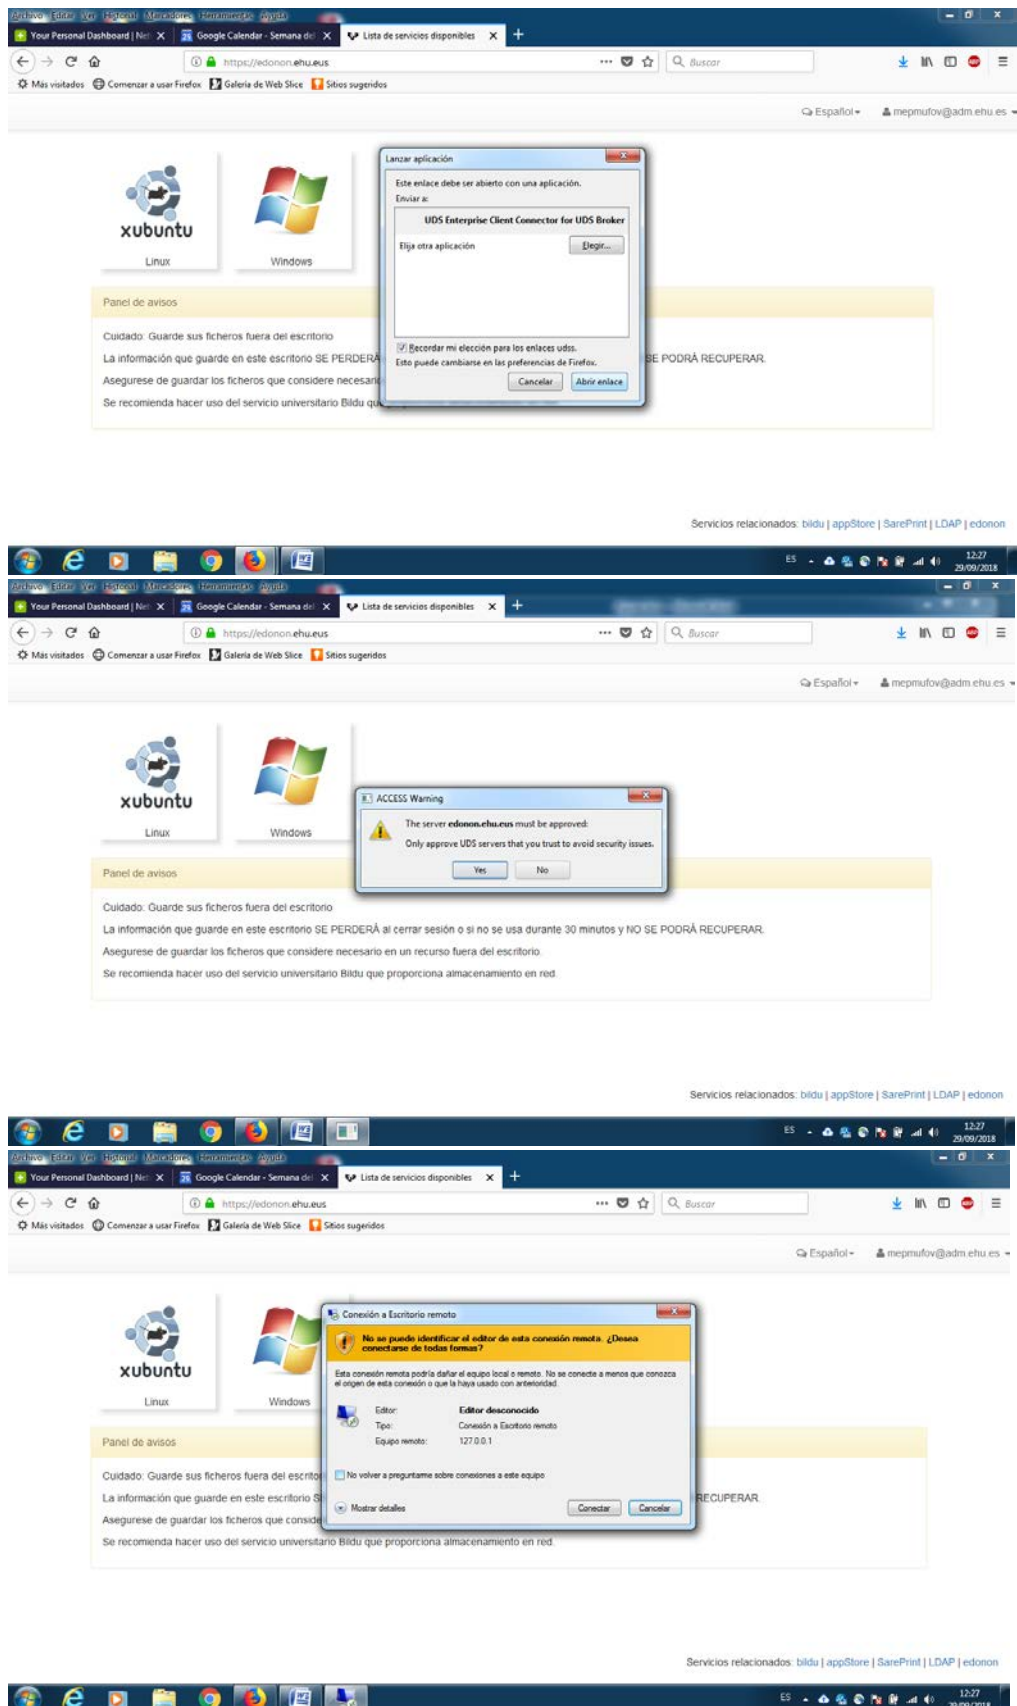

1. Access to www.ehu.es/sincronizacion and type your LDAP username and password. We need to perform this step only **the first time** to build the space reserved in the hard disk, **BILDU**, so you can access to it from any PC of the UPV/EHU network.
2. Access to edonon.ehu.es using again your LDAP username and password.

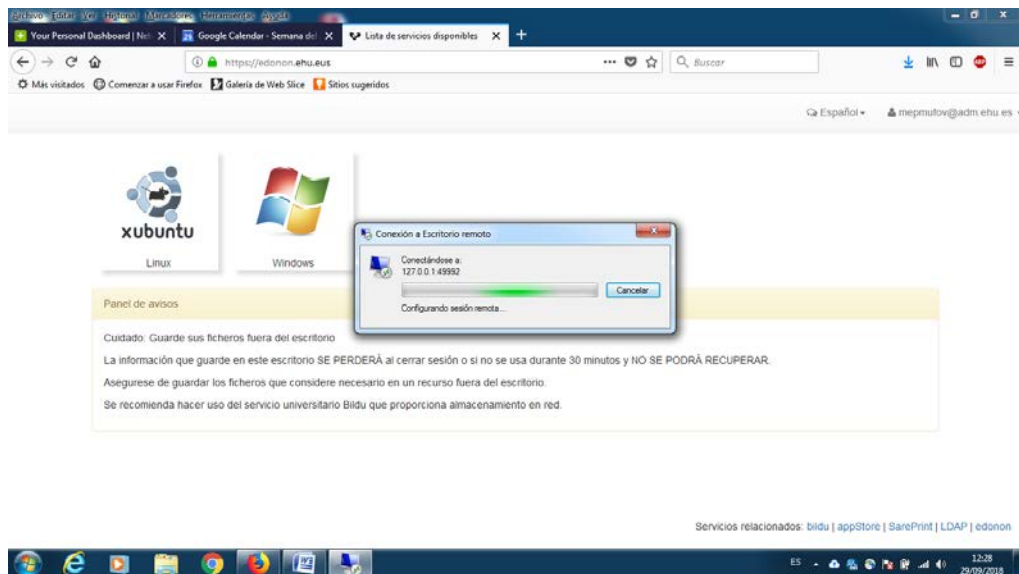

3. **The first time you have to download and install** the plugging that allows you to connect to the virtual machine. When the installation finishes, go back to the previous window (The button "Regreso").

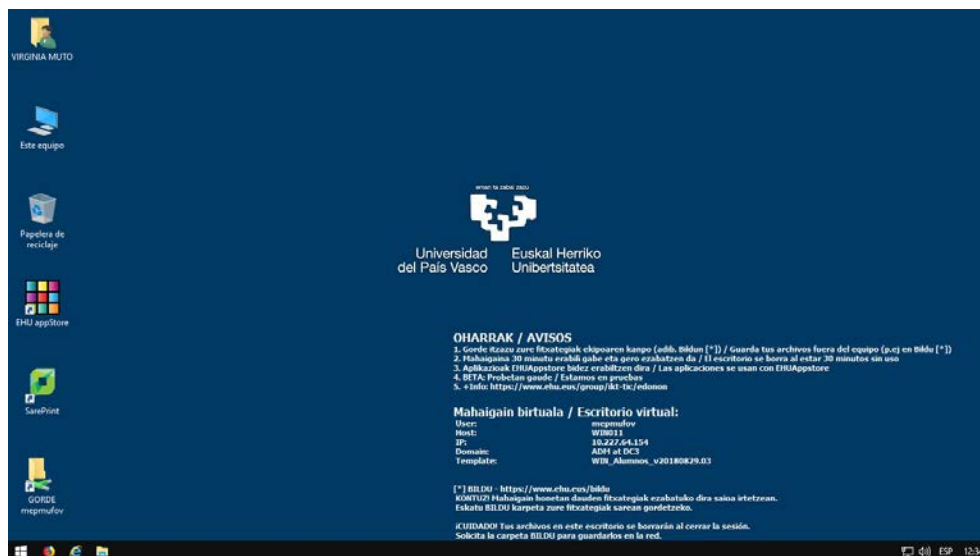

4. Click on the Windows icon to access to the virtual desktop. The first time you need to open the link. Next times, if you have chosen to remember your choice, the link opens automatically.

5. Therefore, we do work in the same way we do in a ZTF-FCT computer class: we run the EHUAppStore app, in order to start the software we are going to work with.

6. Do NOT forget to store your programs/scripts in the BILDU folder, because otherwise, after half an hour of absence of activity or logging out from the virtual desktop, you lose everything you have done.
